

ABSTRACT

[0041] A new and improved firearm cleaning kit including a housing having a plurality of chambers defining openings and lids for covering the chambers to form seals. Pre-moistened patches impregnated with gun cleaning solvent are disposed in at least one of the chambers and pre-moistened patches impregnated with gun oil can be disposed in at least another one of the chambers. The pre-moistened patches can be accordion folded and joined together at perforations. The invention includes a method of cleaning a gun bore including providing a kit with airtight chambers at least one having patches pre-moistened with gun cleaner and/or gun oil, and running one of the pre-moistened patches through the gun bore.
